## ABOUT THE BOOK

Today's legal profession demands that lawyers understand and engage in dialogue about basic empirical research techniques. **Empirical Methods in Law** teaches law students to recognize when empirical research needs to be applied in legal practice. It provides the vocabulary with which to communicate with scientific experts, and an awareness of the type of questions to ask about empirical findings.

**Hailing from diverse backgrounds, authors Lawless, Robbennolt, and Ulen bring practical experience and insight to this accessible research methods text that features:**

- **a consistent focus on basic principles and concepts**, explained in an intuitive style requiring no prerequisite knowledge of math or statistics
- **clear explanations** geared to students new to empirical techniques
  - **optional problem sets and footnotes** that will challenge more experienced students who are eager to explore specific topics in depth
- **generous use of examples that show how empirical techniques** are applied in a range of substantive areas
- **coverage of different stages of empirical research**—from formulating research questions and testable hypotheses, to data collection, sampling, coding, statistical analysis, and presenting data
  - discussion of the connections among the different stages of empirical research
- **sidebars with in-depth views of particular topics** that provide flexible options for teaching
- **learning-by-doing exercises** at the end of each chapter

Combining expertise and an exceptionally student-friendly approach, **Empirical Methods in Law** is suited for a stand-alone course on empirical methods in law or as a supplement for a course or seminar that includes an empirical component.

## SUMMARY OF CONTENTS

### Introduction

- I. **Why Gather, Organize, and Evaluate Data: An Overview of Empirical Methods**

Introduction to Part I

1. Thinking Empirically
2. Research Design

**II. How to Gather Data: Empirical Research Methodologies**

Introduction to Part II

3. Asking Questions: Surveys and Interviews
4. Experiments
5. Archival Methods
6. Sampling
7. Coding

**III. How to Evaluate the Data: Statistical Techniques**

Introduction to Part III

8. Distributions and How to Describe Them
9. Hypothesis Testing
10. Inferential Statistics
11. An Introduction to Correlation and Regression Analysis
12. Advanced Regression Techniques

**IV. Communicating Your Results**

13. Reading, Presenting, and Writing About Empirical Matters
14. Conclusions
